

IN THE SPECIFICATION

Page 8, paragraph containing amendment to lines 8 and 9 (previously amended 5/7/04

Figs. 1C-1H show the construction method by which three layers of fabric come together to form a leak proof undergarment interior. In Fig. 1C, a piece of anchor cloth 16 is positioned over outer shell 12, similarly configured, as a first step ~~take shape by folding the corners 21 at what would be edges 42A and then seaming, i.e., the corners 21 are not removed~~ in the manufacture of anchored pocket 50. In Fig. 1D, stitch line 17 pierces the cloth 16 in a rectangular pattern and attaches to hold pocket 50 to its anchor cloth now stitched centrally. The edges or sides of the material 13 take shape into a pocket-shape 50 as corners 21 are removed, and the sides become seamed at edge 42A by seam line 42, Fig. 1. The pocket may alternatively take shape by folding the corners 21 at what would be seam edges 42A, ~~as shown by the arrows~~, and then seamed seaming; the folded corners 21 are not removed.
